
Subject: 2D non-linear, least-squares fitting routine needed

I'm wondering if there are any IDL procedures available to perform 2D non-linear least-squares fitting, i.e., the equivalent of the CURVEFIT function (using a user-defined, multi-parameter FUNCTION) for 2-dimensions. It doesn't look like any of the fitting procedures contained in the standard library do that.

Any help would be most appreciated.

Sincerely,

David L. Windt
