Subject: Re: Output files
Posted by Jo Klein on Tue, 04 Jul 2006 17:33:19 GMT

Hi Crisï¿½gono,
What do you mean? If you just want to put info into a file, you can do
that like
OPENW,mylun,'myoutputfile.txt',/GET_LUN
PRINTF,mylun,'Output from my program'
CLOSE,mylun
FREE_LUN,mylun

You can put as many PRINTF statements in as you like, you could thus
create a header first and then write your actual output. You may need to
add a WIDTH keyword to OPENW if you have very long output lines.
Is that what you're looking for?
Cheers,
Jo
