
Subject: Matlab to IDL

One of my colleagues dumped some Matlab code on my desk and gave me a choice, learn MatLab or rewrite it in IDL.

Of course, my first choice would be to rewrite it in IDL.

Most of the code is straight forward, but how would I write this MatLab statement in IDL?

```
# -- MatLab Code
```

```
# -- ASSUMES THE YEAR IS THE SAME
```

```
months_differ = month_beg ~= month_end
```

Any thoughts?
