Subject: Matlab to IDL

One of my colleagues dumped some Matlab code on my desk and gave me a choice, learn MatLab or rewrite it in IDL.

Of course, my first choice would be to rewrite it in IDL.

Most of the code is straight forward, but how would I write this MatLab statement in IDL?

# -- MatLab Code

# -- ASSUMES THE YEAR IS THE SAME

months\_differ = month\_beg ~= month\_end

Any thoughts?
