I am pleased to announce the release of IDL 6.3 for Mac OS X on Intel. This new IDL release runs as a native application on all Mac Intel supported machines and offers significant performance benefits. We have seen a growing popularity of Mac OS X for scientific and analysis applications, and this release represents our ongoing commitment to this growing base of IDL users.

Current IDL 6.3 for Mac PowerPC license holders and those interested in evaluating IDL for Mac Intel can download the new release at no charge from <http://www.ittvis.com/download/download.asp>. Transferring a current "LT" or "PU" license for IDL Mac PowerPC may require a new license file for the Mac Intel machine. For assistance, please contact Technical Support at support@ittvis.com. Upgrades and new license purchases for the new IDL 6.3 for Mac Intel can be obtained by contacting an IDL account representative at www.ittvis.com/contactus.

Thank you for your continued use of IDL.
