Subject: Multiple instances of usersym in legend

Hello,

I'm trying to use multiple instances of usersym in the famous
legend.pro by Fred Knight. However, once you define usersym it sticks
and I can't figure out a way to allow it to reset for the following
line.

usersym,[-1, 1, -1, -1], [1, 0, -1, 1]
;usersym,[-1, 1, -1, -1], [1, 0, -1, 1]
legend,['square','right triangle'],psym=[8,8], /fill

this works and plots two squares, but I want the second square to be a
filled right triangle for example.

Can anyone point me in the right direction?

Thanks for your help!

Jonathan
