---

I am looking for a simple comparison tool such with an array of consecutive numbers (i.e. [0,1,2,3,4,5,6,7,8,9]) and array of numbers included in that array (i.e. [0,5,9]) I can calculate the matrix of "left-over" items (i.e [1,2,3,4,6,7,8]). This can be either array of integers or strings. Any Suggestions?
