Hi,

I want to convert seconds to UTC date string. I know you could use SYSTIME(0) but I don't want to lose the milliseconds that SYSTIME(1) provides.

Any ideas on how I could achieve that?

idl> tstamp = SYSTIME(1)
and now I want to get from this something like:

Sat Aug 5 12:57:55.823 2006 (so, a timestamp that INCLUDES the milliseconds)

thanks,

dometz
