
Subject: No screen description in EPS files.

Hello IDL users around the globe,

there is a problem with plotting to an Encapsulated PostScript (EPS) file. IDL (V2.1) didn't put any screen description of the plot (in TIFF, PICT or a other "pixel"-standard) t o g e t h e r with the PostScript code into the EPS file.

When exporting such an EPS file (via network) to another application (suppose to "PageMaker" running on a Macintosh computer) there will be seen on the screen the PostScript bounding box only. So it's very hard positioning the plot in a document or making some additions to the text of the plot.

Has there anybody a solution ?
Probably RSI should have one, I didn't know.

Thanks in advance,
Karl-Heinz.
