Hi,

I am trying to use FILE_COPY command to copy files from once source to destination.
I have the source as another computer mapped to my network. Destination is another computer mapped through network as well.

This is what I wrote:

FILE_COPY, "M:\", "Y:\IRC_PARADIGM", /RECURSIVE

This works.

I had to do the same from the source computer.

So I wrote the command as:

FILE_COPY, "D:\SCP_Folder\", "Y:\IRC_PARADIGM", /RECURSIVE

I get error message saying "Unable to expand wildcard characters or file does not exist"

I do not understand what is wrong here.

Can anybody please help...

Thanks,
HJ.
