Subject: why does the output jpeg look not as good as shown on screen?

Using the following commands:

```
tvimage,imageout,position=[0,0,1,1]
a=tvrd(true=3)
write_jpeg,'out.jpg',a,true=3
```

when I use kuickshow to display the image, the saved image is not as clear as it is shown in the IDL plot window, it is kind of blurring and dimmer. Can one make a jpeg file which is identical to the one shown in the IDL plot window?
