your original problem was RETALL not working in the IDL VM, where you have
no command line. You can use RETALL in real IDL, CATCH in the VM. There is
a /VM test in LMGR. I know, the code will be ugly, but will work.

Maybe IDL is right to terminate the VM for RETALL. RETALL can be defined
as "return to the main program level interactive prompt", so I doubt
ITTVIS will fix it.
