Subject: 3D plot w/ rotation in faster way?
Posted by adisn123 on Thu, 31 Aug 2006 20:27:33 GMT

Hi,
I posted a questions below in "xplot3d rotation with "hide""

Instead of hide, I just simply let xplot3d does not draw any events in
motion_event while rotating and draw after rotation in mouse up button
events.

But, that was not a problem.

When I have about 300,000 events, I can easily rotate and zoom in/out
in xplot3d IF I display the data as they are connected in lines instead
of using symbols.

But, for the purpose of my project, I want scattered data, not
line-connected data points.

Rotating was not the first problem. Even just displaying in the begging
takes forever (with symbols)!!

Does it mean that I should try other 3D plotting tool besides this?

If there any, could anyone recommend for me??

Thanks.
