Can you explain how you like what you see? What's different? What are
the
real improvements?   The more I look at it, the less interesting it
seems. Of
course, when I've had to do any hard core statistical stuff, I've gone
to R
(http://www.r-project.org/index.html) It's free, very well supported,
and
runs most platforms.

So Haje, seriously let me know what's new, better, and how.

Matt
