Have I mentioned lately how much I love this newsgroup! :-)

Cheers,

David

P.S. I've worked on an application that does everything you asked for, but using direct graphics objects, and it was slower than I expected it to be, too. (I haven't seen the iTools application.) Lots of windows, lots of images, lots of communication, huge amounts of data. I think the definitive medical imaging application is awaiting the next big leap in hardware capabilities.
