
Subject: executing a string in VM without using 'EXECUTE'

Hi Guys,

There is probably a simple solution to this but I can't find it: I want to execute the string below in VM, without using (can't use) the 'EXECUTE' command. Any ideas / code etc greatfully received.

```
com='speci=where('+formula+',speccount)    ;write executable
string
t=execute(com)    ;execute string
```

the 'formula' is "(mr(*,*,159) le 8 or mr(*,*,170) gt mr(*,*,159)
or mr(*,*,235) gt mr(*,*,159))"

cheers
