I was wondering if anyone would be able to help me in setting up a cron job to run a wave file. what we have is a file that when at the command line we type 'start_gds' and that starts wave and it runs a file called start_gds.

start_gds looks like ---> cd /products/wave/gds
 wave launch_gds

we would like to set this up in a cron job to run every 45 minutes so in the crontab file we added a line:

45 * * * * /gdspath/start_gds

but this doesn't seem to be running. we tried re booting the machine so the cron would take effect and still no luck.

does anyone have any experience with running wave from a cron job or have any insight into weather wave can even BE run from a cron job?? Thanks for the help!
