> Ratio: 2.5
```

```
IDL> p=fltarr(5d7)  
IDL> t=systime(1) & b=p*.5 &print,systime(1)-t  
    0.23399997  
IDL> t=systime(1) & b=p/2. &print,systime(1)-t  
    0.25000000  
.... ratio = 1.06 here... Pentium 4, windows XP pro, idl 6.3  
I guess the operating system has some influence too?!
```

Jean
