Subject: Ilmage Command Line Posted by StevenM on Mon, 16 Oct 2006 17:29:47 GMT View Forum Message <> Reply to Message

I hope that someone can help me.

I have a 3D array of data. I am trying to display this using iimage. When I use the command iimage, filename(\*,\*,30) I get the slice I want through the volume. But if I try to get the slice at another orientation i.e iimage, filename(30,\*,\*) I get an error message that says the first arguement is invalid.

If I use the tyscl command I get images in both orientations with no problems but I would rather us iimage as I find further manipulations are easier.

Thanks in advance

Steven
