
Subject: Detect APP_SCROLL or SCROLL

Is there a nice way to detect whether a widget_draw is using APP_SCROLL or SCROLL?

I'm attempting to write code which will handles both scenarios, but I can't find a nice way to do it.

Here is a known method, but I'm concerned about the portability of it.

```
function is_app_scroll, id
geom = widget_info(id,/geom)
widget_control, id, GET_VALUE=oWindow
oWindow -> GetProperty, DIMENSIONS=dimensions
if ((dimensions[0] eq geom.DRAW_XSIZE) and $
    (dimensions[1] eq geom.DRAW_YSIZE)) then $
    return, 0
if ((dimensions[0] eq geom.XSIZE) and $
    (dimensions[1] eq geom.YSIZE)) then $
    return, 1
message, 'Incompatible dimensions'
end
```

Thanks

Robbie
