---

Have any of you had experience with using IDLffDICOMEx (or IDLffDICOM for that matter) to read a dicomdir to create a tree representing the hierarchy? It looks like it has to be done entirely "by hand" as IDL's dicom tools don't include anything for handling dicomdirs. It looks straight forward, but potentially very tedious. Any suggestions for tranversing the dicomdir? Or for handling a simple hierarchical tree in IDL?

Mike
