
Subject: need color contouring routine

Does anyone have a color contouring routine which is better than contour/polycontour? Polycontour's inability to handle unclosed contours is quite a handicap. I use the trick of adding the extra row of data around the border to compensate but that often results in garbage around my plots, especially with small datasets.

I could also use a better version of map_set. I do a lot of plotting over the Arctic and I get some bizarre results with land masses which overlap the borders of my range.

thanks,
pat
