I'd like to have a two line axis title on my plot - I've been playing with these odd control codes that were mentioned recently, and got this that almost works, but is too small. I can't up the charsize because then everything else changes. Maybe there's another ! code to increase the size? Is there any documentation on these?

```
if axis_mode eq 3 then ytitle='!s!u'+ytitle+'!r!d'+ytitle2
```

Greg
