Hi

I have got a file with 4 ascii-columns (var-type=double): x, y, z, rho. That means for special values for the 3D-coordinates "x,y,z" I have a value for the density "rho". I want to make the voxels visible with shading, opacity and so on. Is there any IDL-program already available which supplies the routines to do that and can handle such kind of files ? Or is it necessary to convert the data into another formate?

Thanks in advance!

regards

Sven Ohmann
