Hi,

this is not Mac specific, but uses ImageMagick:

```
convert -adjoin -delay 10 lots_of_plots*.eps result_anim.gif
```

The point I would like to make is that it may be worthwhile to use EPS files as the basis for the movie. I needed nice-looking EPS versions of some of the plots for my paper anyway, and I did not want to have to tweak my plotting routines for two kinds of output format. EPS seemed the most versatile. Of course, this costs another conversion step in the movie generation.

chl
