
Subject: Remapping an image in IDL

Hi. I have got an image which is in the geostationary satellite projection. And I know the parameters such as distance of the satellite, lon/lat limit values, sphere_radius, etc. I want to remap this image to another projection such as polar stereographic or mercator in IDL.

I have tried the map_image. But if I am not wrong, it only gets images in geographic lat/lon projection (plate caree) as an input, then converts to another projection.

Is there a way to do that in IDL?

Thanks and regards.

Metrk.
