## Subject: file\_expand\_path Posted by damonanomad on Tue, 12 Dec 2006 23:37:26 GMT View Forum Message <> Reply to Message

Hello,

I am trying to to use IDL and have run into some a strange behavior in 6.2 using file\_expand\_path. The following lines illustrate what I am seeing:

As can be seen above, the path that it is returning is not the true path of the file but I don't know why it isn't. The search path that I have set in "Preferences" (in addition to default) is 'C:\DocSet\MyDoc\IDL' and its sub-directories. (note that '\DocSet\MyDoc' = '\Documents and Settings\user\My Documents' in reality)

Any ideas out there why I am running into this problem? Suggestions would be greatly appreciated.

Thanks, Damon
