Hmm - seems your licensing isn't very robust? Things to try:

Add the license info to your batch:

```
@ECHO OFF
```

```
COPY /Y %1 C:\MYDATA.DAT
```

```
SET LM_LICENSE_FILE=1700@mylicenseserver
```

```
- or -
```

```
SET LM_LICENSE_FILE=c:\RSI\LICENSE\LICENSE.DAT
```

```
START /WAIT IDLDE @mybatch.pro
```

```
COPY /Y C:\MYOUTPUT.DAT %1
```

If that doesn't help, try `START /WAIT CMD /C \path\to\IDLDE @mybatch.pro` instead of the old command, that should give you a properly set up environment.

Cheers,

Jo
