Yes, I feel confident that ENVI does it correctly. And I also feel confident that I cannot do it correctly, given the information in the file and IDL's map projection routines. So, we are at an impasse. We have not heard from the ENVI guys. :-)

Cheers,

David

P.S. I can also align the map, but only by moving the reported corner pixel positions slightly, which I have no logical reason to do. But sometimes logic is the least helpful thing when it comes to computer programs. :-)
