Hi all,

I've been trying to use ENVI's new (since Version 4.3) support vector machine classifier in batch mode. The batch routine is called ENVI_SVM_DOIT, and it seems to completely ignore the keyword PYRAMID_LEVELS, i.e., it classifies images only at full resolution. Anyone else experiencing this? (I'm running the ENVI 4.3/IDL 6.3 under XP).

Thanks

Mort Canty
