I suspect something much more mundane: lousy transcription
or typing skills. Frankly, this kind of struggle is what
I remember from graduate school, and is part of learning
"what's really going on." Probably the correct values are
well-known to everyone who "counts," and the rest of us
have to discover them the same way everyone else had to
discover them. It's all part of gaining confidence that
you really do know what you are doing. :-)

Cheers,

David
