
Subject: Array with mixing data types

Hi,

I have a simple question. I'm using the WRITE_SYLK function to export an array. The array was built using STRARR function, but I put some float numbers inside it.

When I open the *.slk file the float numbers are shown as strings and I need to use an excel command to convert into numbers.

How can I do to make an array with different data types?

Cheers,
Julio
