---

Hi,

I'm running IDL 4.0.1 on SGI's Indigo2 with IRIX 5.3.  
I had a big IDL widget program and recently once a while when  
I ran the program I got following two lines of message and my  
IDL session hung up. I have to kill it from another window.

Xlib: unexpected async reply (sequence 0x56a2)!  
Xlib: sequence lost (0x1569f > 0x56b0) in reply type 0xc!

Does any one know or has experience on this problem ?

Thanks.

Gary
