It seems a little more serious than just being down. There is no DNS entry for that site. Moreover, the domain registrar is listed as "www.allindomains.com", and their whois server says 'No match for "KILVAROCK.COM".' The record is listed as updated on 24-Jan-07. Coincidence? Methinks not.

For now, I suggest using the archive.org mirror:

<http://web.archive.org/web/20060425134941/http://www.kilvarock.com/>

cheers  
chris
