Hi,

I finally managed to draw four different images in a postcript file.

In each image, I'd like to add a circle around important information.
This can be easily done if I'm working with graphical displays, but
with images, I'm not sure how I can approach this matter.

In ps file, the whole image size is 8.3 by 2.0 in inches and it
consists of 4 sub images with 2.0 by 2.0 in inches w/ 0.1 margin
between.
How can I add circles in each image around inportant areas?

Thanks.
