Mike,

now that you opened the can of worms... I am aware of Craig's description fo how variables are stored in the sav files. However, if I remember right, the following notice was incorporated into the sav files after Craig's great discoveries:

NOTICE:

IDL Save/Restore files embody unpublished proprietary information about the IDL program. Reverse engineering of this file is therefore forbidden under the terms of the IDL End User License Agreement (IDL EULA). All IDL users are required to read and agree to the terms of the IDL EULA at the time that they install IDL. Non-RSI supplied software that reads or writes files in the IDL Save/Restore format must have a license from Research Systems explicitly granting the right to do so. In this case, the license will be included with the software for your inspection. Please report software that does not have such a license to Research Systems, Inc.

Thus touching the sav files in any other way than using save/restore has turned into a big grey area (the can of worms). IMHO, it is easier to avoid the format if at all possible than to deal with possible legal actions.

Cheers,
Haje
