I was wondering if there's a simple way to remove a field from a structure?

I can envision a manual way:

0) creating a new structure variable for the result

1) reading the original's tag names

2) stepping through tag by tag using indexed value references, like a.  
(i)

3) using `create_struct()` to put the tags and values into the new structure, one by one, except for the tag(s) we're removing.

Does anyone have a more elegant suggestion?

M. Katz
