Hi,

I have a .sav file from my colleague that works fine on linux box but fails on windows machine. It gives out some warning saying QUERY\_JPEG not resolved. The guy is no longer maintaining the code so I looked up his original code and couldn't figure out where the hell the QUERY\_JPEG is getting called. How can I force it to resolve QUERY\_JPEG? I tried the keyword `resolve_function= 'QUERY_JPEG'` and it did not work. What else do you guys suggest to get this straight? thanks a lot!
