---

We just got a new 2.3 GHz quad-core Xeon compute server, so I updated my small benchmark page with the some new numbers

<http://idl.tamu.edu/benchmarks.php>

We did not buy the fastest available quad-core system (max speeds are somewhat slower than the current dual-cores). Multi-threaded performance seems to be quite good.

I think the most remarkable thing is that we got 8 fast cpu's and 16 GB of RAM for just under \$6k.

Cheers, Ken
