Subject: help on MODAL keyword

In the buildin pickfile procedure, there is a keyword modal
in the line of XManager, which makes the other widget
insensitive. But I want to use several pickfile at the same
time, I want to select several groups of file names.
I rewrote pickfile, and set modal to zero. But from the base
widget I cannot launch second pickfile (from different
button). I can drive other events except pickfile.
What's the reason for this? Does common block have anything
to do with this?

I wrote another program pickfiles based on pickfile. PickFileS
can pick any number of filenames. I can launch Pickfile and
Pickfiles at the same base same time, but I cannot launch
two pickfile widgets. I cannot launch two pickfiles either.
