---

I've been trying to look for the purpose of the first element of !  
p.multi ... can somebody help?

I know that the

!p.multi[1] is for no. of column

!p.multi[2] is for no. of row

!p.multi[3] is for ..... what?

!p.multi[4] is for direction (either column-major or row-major)

So .. !p.multi[0] = ?
