It's no problem being a beginner. Just be sure you are doing your homework and realize everyone here is *suppose* to be doing something productive with their time besides answering questions. You really only have to ask once. If someone knows the answer, or has time to respond, they will.

In this case, I think we were giving you time to discover for yourself what was wrong. When someone jumps on the newsgroup like this, and starts asking obvious questions, and seems in a big hurry for the answer, there is a tendency to think we are doing someone's homework assignment for them. We are not here for that. But I think you will find we tolerate all kinds of real questions cheerfully.

Cheers,

David
