Paul,

> why are you using DOUBLE in the above line?

I know its of no use as both foq0 and foq are returned as double, but
just in case...

> It seems all your numbers are exactly the same until you print the resultant foq0/foq. All
> the (internal to int_LUN I assume) f/Q numbers are the same.

More precisely, it shows the difference for foq0 (a hypothetical
situation) when the arguments are passed by value and by reference.

> Why not just do,

Not really helpful! Same result.
