Hi,

Just a quick and easy question. I have a widget with columns of lists and i want to scroll along in the x- direction only. If i use '/scroll' i get a horizontal and a vertical scrollbar but i notice that in a widget_list there is only a vertical one. Therefore, it must be possible to have only a horizontal one. I've looked through the reference guide and manual but can't find how to do it. Am i just missing it ? Or, can someone tell me how to do it ?

regards,

David
