Hi,

what happens if you do

```
int_LUT, 412.5, 1, 0.0D, 0.0D, 0.0D, 0.03D, result1  
int_LUT, 412.5, 1, null, null, null, 0.03D, result2  
int_LUT, 412.5, 1, 0.0D, 0.0D, 0.0D, 0.03D, result3
```

is result1 eq result3?

Is there any code in int_LUT that references files or
COMMON blocks? Could that be called even though it is
not supposed to be?

chl
