I don't know the answer to this question, but it wouldn't surprise me to learn that the contour plot in iContour didn't use an IDLgrContour object at all. It seems more likely that it uses ISOContour to create the contour lines, which gives them a great deal more flexibility in setting the properties of each individual contour.

I would guess obtaining this kind of functionality in your own code would take more more and a good deal more time than you currently have allocated to it.

Cheers,

David
