
Subject: Help with Sensitivizing my menu buttons

Sorry to bother you with this, but I can't find an adequate answer in the manual. I'm trying to sensitivize and de-sensitivize the buttons on my menu bar in IDL. The only problem is that I need a widget_id for the buttons, and they're not there (at least not obviously). Could someone please tell me of a function or something that returns the widget id of a menu button, or just any way of doing this? Thanks.
