Subject: beginner's help Posted by marksaulrosin on Fri, 23 Mar 2007 18:10:56 GMT View Forum Message <> Reply to Message

Hi,

I'm new to using IDL and unix and need to do something v.simple but don't know how. I am creating a series of .dat files with a fortran procedure that i'm running and i want to process them to create a little video. I don't know what the syntax for doing this inside a .idlbatch file is.

Any help would be appreciated.

Mark
