Good day, everyone...

I know there is an excellent functions to count the number of lines of data file...

What about file_rows? Is there any functions to check the number of rows?

If there is no functions, what can I do if I want to have the number of rows of a big data file, for example, (*, 169245)? I found the number of lines using file_lines function. The number of rows around 100, but I need the exact number. Do I have to count one by one?
