Subject: rotate and transpose images in xobjviewer
Posted by vijay on Sat, 31 Mar 2007 12:18:48 GMT

Hi, i am having a problem in rotating an image in the xobjviewer. the problem is not with the rotate button but my image itself rotated and transposed in the xobjviewer. So i want the image in the xobjviewer to be transposed and rotated for 270 degrees. i can't able to do this using the rotate command also. So tell me how to rotate and transpose the image.
